

## Summer 2017

In August we distributed portable water filter purification systems to twenty families who attend the feeding program. The positive impact on the health of people that clean water has in the developing world cannot be overstated.

Maria explains to Francisca how to set up the filter system when she gets it home.

We purchase the systems locally in Xela with funds donated to the mission.

The filter inserts need to be replaced every two years. Irma already has a system that the mission gave her a couple of years ago and only needed the filter insert.

Over the past several years Fernanda has worked with the mission on various microbusiness sewing projects.

Recently we had a neighborhood carpenter make a sewing table to fit a machine that we had purchased in the US.

The feeding program continues to be the anchor of the ministry. Presently there are about fifty souls who come to the food outreach for a nutritious hot lunch.

Together with the friends of the mission in the US and Canada we are making a difference for good as we share the love of Christ in Guatemala.
